CASE STUDY

nameOn Removed Distracting CTAs To Increase Revenue By 11.4%

11.4%

INDUSTRY Consumer Discretionary

LOCATION Sweden

CAPABILITIES USED A/B Testing

VWO and nameOn

This case study draws on the original case study written by Steven Macdonald, an advisor at KingsPoint, an agency based in Norway that helps brands like nameOn to increase the conversion rates of their websites.

nameOn is a major supplier of embroidered personalized gifts in Scandinavia. The company used the VWO platform for conducting a series of A/B tests.

Objective

The objective of this test was to increase visits to the checkout page through the cart page by reducing cart abandonment.

Solution

nameOn wanted to improve conversions from its website. Using Google Analytics, the team identified high-value pages based on performance over the past 12 months. Loosely based on the PIE framework from Wider Funnel, this analysis provided valuable insights about which pages should be A/B tested and in what sequence (that is, which pages should be tested first).

Accordingly, the team set a target of increasing visits from the cart to the checkout page by 10%.

This is what the original page looked like:

_	
r:	
tikel	
EN	
149,00 kr	
30 kr	
10 kr	
AN Iresser	

A review of the original checkout page revealed that there were 9 call-to-actions (CTAs) on it, including **Sign up for newsletter, Like us on Facebook**, and **Go to home page**.

	858 🕨	Varukorg 858	272	
badhandduk-valkomstgava	170		(exit)	78
entrance)	63		/checkout/cart/	64
badhandduk	57	586 (68.30%)	/imdiscount/	38
imdiscount/	49	proceeded to Kassa	1	7
	27		/frakt-levering	6

The hypothesis was that the large number of CTAs on the cart page distracted potential customers, so making the main CTA button stand out would increase the click-throughs to the **Continue to checkout** button. As a result, more visitors would complete their orders instead of leaving the page.

The team created a variation that had no CTAs except for **Welcome bonus** and **Continue to checkout**. The color of the button was changed from yellow to blue, to make it clearly stand out from the rest of the page. This is what the variation looked like:

nam	le(Jn		Sõi	k i hela butiken	SÖK	Mitt ko	nto 🛛 🐊 1	artikel 149,00 kr

					Moms				29,80 kr	
					Totalsumma				149,00 kr	
								🟓 Gå ti	ill kassan	
									Ca till kassar	

Choosing the CTA color was taken from the Conversion Optimization: 6 Power Tips of the Trade presentation by Angie Schottmuller, which includes the fantastic clockwork conversion wheel:

The test was run for about 6 weeks.

Conclusion

The hypothesis was proved right as more people visited the checkout page during the test period. The overall e-commerce conversion rate and average order value both increased. The overall performance

saw an **11.40% increase with** 99% statistical significance.

Average Case	72.7	76 s2%			-		452/621

From a sales perspective, nameOn considered March to July as "low season" and August to December as "peak season." Based on Google Analytics data from 30 days prior to the test, the team estimated that a 10% increase in visits to the checkout page would boost monthly sales by more than \$8,500, adding up to incremental sales of about \$100,000 per year.

Realizing that using VWO to conduct new tests was a quick process, nameOn followed up the above tests with new A/B tests on its product and category pages.
